PERSONAL INFORMATION

Phone:	+86 13001998064	Address:	Peking University, 5 Yi He Yuan Road, Haidian District, Beijing, P.R. China
Email:	gmh@pku.edu.cn	ORCID:	orcid.org/0000-0002-3680-5420
Homepage:	mh-guo.github.io		

EDUCATION

Princeton University	Princeton, US
Graduate Student, Department of Astrophysical Sciences	Starting from Sep. 2021
Peking University	Beijing, CN
Bachelor of Science in Physics, Yuanpei College	Sep. 2016 – Expected July 2021
<ul style="list-style-type: none">• GPA: 3.65/4.0; GRE Physics 990/990• Relevant Advanced Courses: Topology, General Relativity, Group Theory, Quantum Field Theory, Gravitational Wave Physics, Computational Physics, Computational Fluid Dynamics, Foundations of Parallel and Distributed Computing, and all lower-division courses• Thesis: A Numerical Study of Scalar-tensor Gravity Theory	

RESEARCH INTERESTS

- Galaxy dynamics and evolution, galaxy structure
- Black hole (BH) physics, high energy astrophysics, accretion disks, active galactic nuclei (AGN)
- Modified gravity, neutron stars, pulsars, gravitational waves, dark matter
- Numerical simulations, Numerical methods, New numerical techniques

RESEARCH EXPERIENCE

- Surrogate model of scalar-tensor gravity and application to neutron stars** Feb. 2020 – Present
Advisor: Prof. Lijing Shao Peking University, CN
- Designed and developed a method for computing derived quantities in scalar-tensor gravity of Damour and Esposito-Farèse (DEF) with spontaneous scalarization phenomena developed for neutron stars
 - Constructed reduced-order surrogate model for the derived quantities
 - Coded the model in a python package [pySTGROMX](#) that speeds up calculations at two order-of-magnitude yet still keeps accuracy, compared with the previous method
 - Applied pySTGROMX to constrain the parameters of the DEF theory with well-timed binary pulsars
 - Currently working on a first-author paper manuscript in prep for *Physical Review D*
- Evolution of black hole mass function at high redshift** Oct. 2020 – Present
Advisor: Prof. Kohei Inayoshi Peking University, CN
- Constructed a model for the evolution of black hole mass function based on AGN luminosity
 - Predicted the evolution of black hole mass function and AGN mass function using the latest Hyper Suprime-Cam (HSC) data
- Hunting for wandering massive black holes** Feb. 2019 – Present
Advisors: Prof. Kohei Inayoshi, Prof. Luis C. Ho Peking University, CN
- Performed three-dimensional simulations for gas accretion onto a wandering black hole at the outskirts of galaxies (e.g., massive ellipticals, Milky Way, dwarf galaxies)
 - Constructed radiative inefficient accretion-flow models for accretion near the horizon of a black hole
 - Applied the simulation results to the emission model and worked out the spectral energy distribution for the accretion flow onto a wandering black hole
 - Studied the detectability of wandering (massive) black holes in different types of galaxies, predicting that ALMA will enable us to hunt for a population of wandering black holes
 - This work resulted in a first-author publication in the *Astrophysical Journal*
- Quasar lifetime model** June 2020 – Sep. 2020
Advisor: Prof. Kohei Inayoshi Peking University, CN
- Constructed a model for lifetime of quasars based on standard disk model
 - Built a theoretical correlation between the mass, luminosity and lifetime of quasars
 - Compared the model with the observed quasar lifetimes from measurements of proximity zone size
- Coevolution of supermassive black holes and their host galaxies** Mar. 2018 - Jan. 2020
Advisors: Prof. Luis C. Ho, Prof. Victor P. Debattista Peking University, CN
- Made N-body simulations to investigate the dissolution of bars and the growth of bulges, under the dynamical influence of central black holes
 - Built morphological decomposition for the structures of the galaxy models using IRAF and GALFIT
 - Investigated the growth of a central black hole, the dissolution of the nuclear bar, and the gradual formation of an inner bulge through morphological decomposition as well as the dynamics of galaxies

- Demonstrated that the initially boxy/peanut-shaped bulge is transformed into a more massive, compact structure that bears many similarities to a classical bulge, in terms of its morphology, kinematics, and location on standard scaling relations
- Led to a first-author paper published in the *Astrophysical Journal*

HONORS AND AWARDS

Weiming Bachelor (“未名学士” 称号)	June 2021
Yuanpei Outstanding Young Scholars (“元培青年学者” 称号)	Dec 2020
Lin-bridge First Prize for Undergraduate Research (endowed by Prof. Douglas Lin)	Sep. 2020
Yuanpei College First Award for Undergraduate Research	June 2020
Xingcheng Award for Undergraduate Research	May 2019
National Undergraduate Research & Training Program	May 2019
Peking University Scholarship for Outstanding Freshmen (top 10%)	Sep. 2016

CONFERENCE EXPERIENCE

2020 PKU-DoA Undergraduate Astronomy Symposium (Oral presentation) <i>Hunting for Wandering Massive Black Holes</i>	Sep. 2020
2019 PKU-DoA Undergraduate Astronomy Symposium (Oral presentation) <i>A New Channel of Bulge Formation via the Destruction of Short Bars</i>	Sep. 2019
2019 Annual Meeting of Chinese Astronomical Society (Oral presentation) <i>A New Channel of Bulge Formation via the Destruction of Short Bars</i>	Sep. 2019
IAU Symposium 353: Galactic Dynamics in the Era of Large Surveys (Poster presentation) <i>The Role of Short Bar Destruction in Regulating the Co-evolution of Black Holes and Bulges</i>	June 2019

TECHNICAL SKILLS

Programming: Proficient in Python, C/C++, L^AT_EX, Mathematica, Git; Basic knowledge of Matlab and Fortran.

Software and Packages: emcee, MPI, OMP, cuda, SymPy, yt, VisIt, ParaView, PLUTO, IRAF, GALFIT

Techniques: Massive parallel computing on supercomputer, analyzing dataset and visualization.

Language: Mandarin (Native), English (Fluent; GRE General 320+3; TOEFL iBT 102)

ACTIVITIES

- 2020 Theoretical Physics and Particle Physics Summer School of Peking University Aug. 2020
- São Paulo School of Advanced Science on First Light:
Stars, Galaxies and Black Holes in the Epoch of Reionization Aug. 2019
